Character Cookie Images

How to make the images from **character-image-prompts.csv**. Moses and Esther are already done; use them as your examples.

Leonardo settings (both steps)

Model	**Nano Banana Pro**
Aspect ratio	**2:3** (portrait)
Size	**Small**
Style	**Dynamic**

For each row

1. **Step 1, the character:** paste the *Character prompt (step 1)*. Add the **Moses character image** as the image reference. Generate and pick the best result.
2. **Step 2, the cookie:** paste the *Cookie prompt (step 2)*. Add **your Step 1 image** as the image reference. Generate and pick the best result.
3. **Save both** using the *Save as* column: `<Save as>-character.png` and `<Save as>.png` (the cookie).
4. Type **Yes** in the *Done* column.

Rows marked **Skip** get no image.

Redo the image if you see any of these

- **Anything cut off:** head, feet, hands, or the object they hold (staff, crown, etc.). The whole body and object must fit, with space all around.
- **Odd bodies:** extra or missing arms, legs or fingers; hands melted into objects; twisted limbs.
- **Background not flat bright green:** any shadow, floor, table, scenery or darker green.
- **Green on the character:** green clothes or a green tint on skin. It will be erased with the background.
- **Face or skin changed** between Step 1 and Step 2, or skin looks grey or green.
- **Short, stubby or toy-like** body. They should look like real adult proportions (children as children).
- **Cookie looks off:** like a real photo, lumpy, drippy, or washed-out colors. Match the Moses and Esther cookies.
- **Any text,** letters or watermarks.
- **Looks like someone you already made.** Every character should look different.

> If a result keeps failing, generate again rather than changing the prompt. If a prompt itself seems wrong, write the problem in the *Done* column, move on, and let us know.
